

Nurturing early-stage companies to accelerate transformative innovation

Our multifaceted initiative in Europe, Johnson & Johnson Innovation, JLINX (JLINX) has been uniquely designed to identify and nurture early-stage companies actively pursuing research with the potential to transform human health. By offering start-ups a spectrum of flexible ways to grow and collaborate across the European life science ecosystem, we aim to catalyze scientific advances and accelerate breakthroughs.

The day-to-day operations are managed through a close collaboration with *bioqube ventures*, an experienced life science incubation and investor management team, which will provide independent oversight for venture funding and company selection.

JLINX complements and extends the Johnson & Johnson Innovation network of initiatives to create a unique environment to advance your scientific research and development for the benefit of patients. JLINX is venture-based and Johnson & Johnson companies will not hold any specific rights to commercialized products by virtue of the JLINX relationship.

“Our mission is to identify and advance the best science – internal or external – to bring healthcare solutions to patients and consumers around the world.”

– Paul Stoffels, M.D.,

Chief Scientific Officer and
Worldwide Chairman, Pharmaceuticals,
Johnson & Johnson

Our unique approach to support you

At JLINX we can provide opportunities to share ideas and collaborate with other entrepreneurs while accessing a unique combination of resources including investment, infrastructure and relevant internal and external scientific, technical and business expertise.

Located in a fully dedicated facility on the Janssen Campus in Beerse, Belgium, JLINX:

- is designed to foster a creative start-up culture
- provides access to the best scientific talent and resources on the Janssen Campus
- draws upon the full global scientific resources of Johnson & Johnson Innovation
- is focused on human microbiome research, alongside other areas of innovation in pharmaceuticals and cross-disciplinary healthcare solutions
